## DETAILED ACTION

### *Allowable Subject Matter*

1. Claims 1-30 are allowed.
2. The following is an examiner's statement of reasons for allowance:
3. **As per claim 1 and dependent claims 2-14**, the Examiner found no reference in the prior art that disclosed or made obvious a mammography system comprising: a mammography apparatus, wherein the mammography apparatus comprises a communication section for transmitting radiography performance information to a controller, the radiography performance information including first key information for relating the radiography performance information and radiographing order information to each other; wherein the controller further comprises a controlling section for relating the radiography performance information and the radiographing order information based on the first key information included in the radiography performance information transmitted from the mammography apparatus and the second key information included in the stored radiographing order information, as recited in independent claim 1.
4. **As per claims 15, 29 and 30 and dependent claim 16**, the Examiner found no reference in the prior art that disclosed or made obvious a mammography system (and corresponding method) comprising a mammography apparatus, wherein the mammography apparatus comprises a communication section for relating radiography performance information to read mamma image, the radiography performance information including first key information for relating the radiography performance information and radiographing order information and for transmitting the related radiography performance information and the related mamma image to a controller; wherein the controller further comprises a controlling section for relating the mamma

image, the radiographing order information and the radiography performance information to one another based on the first key information included in the radiography performance information transmitted from the mammography apparatus and the second key information included in the stored radiographing order information, as recited in independent claims 15, 29 and 30.

5. **As per claim 17 and dependent claims 18-28**, the Examiner found no reference in the prior art that disclosed or made obvious a method for managing information in a mammography system comprising a mammography apparatus, a reading apparatus and a controller, the controller being connected the mammography apparatus and the reading apparatus, the method comprising: transmitting radiography performance information including first key information from the mammography apparatus to the controller, the first key information for relating the radiography performance information and radiographing order information to each other; storing radiographing order information including second key information in a storage section of the controller, the second key information for relating the radiography performance information and the radiographing order information; and relating the radiography performance information and the radiographing order information to each other based on the first key information included in the radiography storing the performance information transmitted from the mammography apparatus and the second key information included in the stored radiographing order information, in the controller, as recited in independent claim 17.

6. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

***Conclusion***

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. **U.S. Patent Application Publications 2004/0086164 to Moriyama et al. and 2004/0240624 to Shiibashi et al.** disclose radiography systems comprising a radiographic unit (110; 5 respectively), a reading unit (120; 3 respectively) and a controller (140; 6, respectively). The aforementioned references fail to disclose or make obvious a mammography system including a mammography apparatus comprising a communication section and controller for relating first key information relating radiography performance information and radiography order information, as claimed in instant application 10/825,553.

8. **U.S. Patent Application Publication 2005/0213702 to Akagi** is co-pending application 11/077860 and is recognized as Applicant's own work and not available as a prior art under 35 USC 102 or 103.
